

*Press Release of DOASENSE GmbH*

## **DOASENSE announces new partnership with Mediq as appointed exclusive distributor for Estonia**

**HEIDELBERG – 20 January 2022 – DOASENSE GmbH, an in vitro diagnostics company focused on the development and commercialization of innovative rapid tests, today announced that Mediq Eesti OÜ has been appointed as exclusive distributors of DOASENSE solutions in Estonia.**

We are delighted to announce a new partnership with Mediq, as our exclusive distributor for Estonia. Mediq is a well know European international healthcare company expanding from its original regional focus on the Nordic and Baltic countries. Mediq's dual commercial presence with the laboratory and the clinicians provides an ideal opportunity to introduce DOASENSE. The DOASENSE DOAC Dipstick remains the only approved DOAC rapid test available on the market.

*"We are excited to launch the product finally onto the market and are looking forward for a long term and successful cooperation."* said Aare Järveld, Managing Director at Mediq Eesti.

The agreement is effective immediately.

### **About the DOASENSE Product Suite:**

The CE-marked, ANVISA and TGA registered DOAC Dipstick is a qualitative all-in-one POCT for both direct factor Xa and thrombin inhibitor DOACs. The test is performed using a urine sample from the patient. The DOAC Dipstick provides results within 10 minutes where they are needed most: at the point-of-care. Specially developed accessories complete the first suite of CE-marked products for rapid point-of-care DOAC testing: Objective documentation of results can be achieved with the compact, automated DOASENSE Reader. And the DOASENSE Control Urines are specially designed reference substances to support quality assurance needs. The in vitro diagnostic products are for professional use only.

### **About DOASENSE:**

DOASENSE is a medical technology company with operations in Heidelberg, Germany. DOASENSE's exclusive, patent protected technology changes the way of testing for direct oral anticoagulants, serving an unmet clinical need.

The company is open to distributor inquiries for further broadening the international market presence of its products.
